Summary

Cloud-Focused Full-Stack & App Engineer building production web, mobile, and cloud-native systems end-to-end: exam platforms for 600+ candidates, React Native/Expo apps on the Play Store and App Store, Node.js/Bun backends, Terraform on AWS with real observability, and AI features with RAG pipelines and agent tooling. 2+ years of hands-on experience shipping production-grade systems with secure auth, automated CI/CD, and delivery 60–70% faster than standard timelines.

Technical Skills

Languages: JavaScript, TypeScript, Python, Java, C, C++, SQL
Frontend & Mobile: Next.js, React, Tailwind CSS, TanStack Query, Zustand, React Native, Expo, EAS CLI, Electron
Backend & APIs: Node.js, Bun, Express.js, Flask, REST APIs, WebSockets, Redis, Microservices, Drizzle, Prisma
AI & Automation: LangChain, LangGraph, RAG pipelines, AI agents, OpenAI, Gemini, AWS Bedrock, Unsloth
Databases & Auth: PostgreSQL, MongoDB, Supabase, Firebase, Convex, Clerk, OAuth, JWT, RBAC
Cloud & DevOps: AWS (EC2, RDS, ElastiCache, S3, ALB, Lambda, SNS, SES), Terraform, Docker, GitHub Actions, CI/CD, Prometheus, Grafana, Loki

Experience

Lead Developer (Contract) — Remote
Ramdeobaba University — WCL Examination Platform (end client: Western Coalfields Ltd.) — *Jun 2026 – Jul 2026*

- Led architecture and delivery of 4-app PSU recruitment exam platform for **~600** registered candidates (**~530** appeared): Electron kiosk exam client, Next.js admin control room, Next.js hall-ticket portal, and Bun + Express + Drizzle API
- Built server-authoritative exam engine for **100**-MCQ, 1-hour exam with instant server-side grading, negative marking, and auto-submit; hardened with Redis-cached hot state, idempotent answer upserts with monotonic client_seq, per-IP rate limiting, and PgBouncer pooling
- Validated scale with **1,200+** concurrent-user rehearsal and scripted k6 runs to **10,000** VUs; ran chaos drills for API-node kill, network drop, and RDS failover with zero lost answers
- Codified full AWS stack in **Terraform** (ALB + 4 target groups, ACM wildcard TLS, EC2, RDS PostgreSQL, ElastiCache Redis, S3, Route 53, per-tier security groups); single apply rebuilds stack in **~2 min 40 s** vs days of manual setup
- Automated GitHub Actions to Docker Hub to watchtower deploys with release.sh versioning and self-updating Electron builds; added Prometheus + Grafana + Loki observability at grafana.rbuexam.in

Software Development Intern — Remote
Volvox (Open Source Software Company) — *Jan 2026 – Feb 2026*

- Built the cross-platform push-notification pipeline for **Sobers**, a production recovery-tracking app, using Expo Notifications backed by **AWS SNS** pub/sub on iOS and Android
- Automated builds and publishing to the **Google Play Store** and Apple App Store via **CI/CD**; added linting and version-control checks that cut pipeline run time by **28%**
- Reengineered the API data layer around TanStack Query (caching, request deduplication, background refetch), replacing ad-hoc fetch configuration

AI/Cloud Engineering Intern — Remote
Kyvra Labs — *Nov 2025 – Jan 2026*

- Engineered an AI **RAG** pipeline: an **AWS Lambda** service triggered by EventBridge performing OCR and text reformatting with open-source models fine-tuned on client data using Unsloth, re-validated weekly
- Implemented AI-agent monitoring with **Prometheus**, **Grafana**, and Langfuse with custom logging; built Docker-based deployment workflows that cut hosting and model-serving costs

Freelance Software Engineer — Remote
Client contracts — *2025 – Present*

- Delivered **TurfBuddie** turf-booking site with slot scheduling and Razorpay payments; built **Fleet** Android app for vehicle, staff, billing, and payments over REST on Firebase
- Contributed to **ANDI** relationship-intelligence product (Gmail/Calendar/LinkedIn ingestion, retrieval indexing, contact knowledge graph) in a 3-developer team with per-user isolation and MCP integration layer

Technical Lead Nagpur, India
Google Developer Group RBU *2024 – Present*

- Delivered **4+** production cross-platform apps with scalable backends and cloud-native infrastructure; automated CI/CD with Docker + **GitHub Actions**, cutting deployment time **60%**
- Led technical workshops on GitHub, backend engineering, and AI workflows for **5,000+** online and **2,000+** offline participants

Projects

Skarm: Multi-Tenant Issue Tracker | *Next.js, Convex, Clerk, TypeScript, Vercel AI SDK, AWS SES*

- Designed Linear-style tracker: real-time drag-and-drop Kanban, sub-issues with typed relations, cross-team projects and cycles with burndown, cursor-paginated queries targeting **10k**-issue orgs
- Integrated two-way **GitHub** sync (HMAC-verified webhooks, PR linking), Figma OAuth previews, and SES digests; built org-aware **AI agent** with tool calling, spec drafting, and **4096**-dim embedding dedupe
- Enforced RLS-style org scoping on every server function with Clerk B2B billing across **3** tiers and server-side free-tier limits

Studzee: AI-Powered SaaS Ecosystem | *React Native, Expo, Node.js, AWS, Docker, PostgreSQL, Redis, LangChain*

- Engineered 4-platform system (web, **Play Store** mobile app, Electron desktop admin, centralized backend) on **AWS** EC2/S3 with containerized services, Redis caching, and LangChain agents
- Cut deployment and operational overhead **40%** via CI/CD; implemented JWT + RBAC auth across all clients

OverDrive: DevOps Automation Platform | *TypeScript, Docker, GitHub Actions*

- Built zero-config deploys: stack detection generating Dockerfiles and GitHub Actions; self-healing debugging that opens fix PRs automatically

Schedula: Event Ticketing App | *Expo, Supabase, Node.js, Clerk*

- Created JWT-protected QR ticketing with in-app scanner and role-based check-in; Clerk Google OAuth, EAS + GitHub Actions CI/CD, Render backend with health-check crons

Morph57: AI LaTeX CV Builder | *TypeScript*

- Built JD-to-ATS-optimized LaTeX resume pipeline with structured generation and live preview

Education

Shri Ramdeobaba College of Engineering and Management Nagpur, India
*B.Tech in Computer Science (AI & ML) (**CGPA: 8.56/10**)* *2023 – 2027 (expected)*

Achievements

Community & Google Ecosystem

- **Google Gemini Ambassador (2024–2025):** led GenAI workshops for **4,000+** students across 3 colleges in two weeks; web-dev workshop for **200+**, Android seminar for **100+**
- Deployed **4** dynamic websites for GDG Campus events, cutting manual workload **40%**

Certifications & Writing

- AICTE Fundamentals of Deep Learning (NVIDIA); HackerRank Python (Basic) + badges in Problem Solving, Java, Python, SQL, C; Medium articles on AWS deployment; Substack engineering newsletter
